

Marcin Augustynów

Wroclaw, Poland • +48 536 808 759 • marcin.augustynow@gmail.com

Summary

Results-oriented Software Engineer with a focus on Backend development and Cloud Infrastructure. Proven experience in designing scalable microservices on AWS, implementing secure CI/CD pipelines, and integrating AI solutions (AWS Bedrock) in a production environment. Proficient in Python, Golang, and TypeScript, with a strong commitment to writing clean, testable code and optimizing system performance. Eager to leverage system design skills in a challenging environment where I could reach my true potential.

Work Experience

Software QA Engineer, Full Time

Jan 2024 – Present

Dolby Laboratories

- Managed AWS cloud Infrastructure and **reduced cloud costs by close to 50%**.
- Designed and delivered a **Certification Service** that **reduced SDK licensee certification time** and enabled data-driven decision making. Implemented a hybrid architecture with customer-delivered code and proprietary components hosted on **AWS behind API Gateway**, secured with **JWT authentication**. Integrated the service with multiple internal products through cross-team collaboration to align interfaces and ensure compatibility.
- Developed a **full-stack application integrating AWS Bedrock with Model Context Protocol (MCP)**, enabling users to register MCP servers and use them alongside Bedrock models through both web and CLI interfaces. The backend brokered communication between Bedrock models and selected MCP servers, allowing models to call exposed tools during chat sessions. The system included **LDAP-based authentication**, session management with cookies, conversation storage, auth token generation and a **caching layer to optimize performance**.
- **Migrated legacy CI systems to GitLab** and built tooling to measure and analyze performance test results. Created test cases, test infrastructure, measurement utilities, and a full-stack web application with a database on AWS to **streamline result analysis** for QA teams.
- **Modernized internal Python environments** which involved keeping up with new Python version releases and utilization of tools like UV
- **Authored documentation** for design decisions including software components, testing, security, backups, and roadmaps.

Skills

Programming Languages: Python, Golang, TypeScript

Technologies: AWS, Docker, HTTP/S, PostgreSQL, React, Gitlab CI/CD, FastAPI, Pytest

Languages: English C1+, Polish Native, German B2

Achievements

Winner, Annual Innovation Hackathon: Won the internal San Francisco engineering competition focused on AI and new technology.

Awarded Rare Off-Cycle Promotion: Recognized for exceptional performance outside the standard review cycle, including a company-wide commendation from the Vice President.

Academic Merit Scholarship: Awarded university scholarship for outstanding academic performance.

Education

Bachelor of Computer Engineering

Oct 2022 – Feb 2026

WSB Merito Wroclaw, Specialization in Cloud Computing
